

EVALUATION & SANDBOX WALKTHROUGH GUIDE

This document provides quick-start credentials and sandbox instructions for testing and evaluating Malkhana Vault.

Secure Master Password (Decryption Screen)

Before accessing the login portal, the database vault must be decrypted. If the application is freshly installed or has been reset, initialize it with a master password:

- **Master Password:** `admin` (or any custom password of your choice during initial setup)
- **PIN Vault (Quick Unlock):** If enabled in settings, you can unlock the vault using a 6-digit device PIN: **111111**.

Demo Officer Profiles & Credentials

Once the vault is decrypted, you will see the **Secure Access Portal** (Login Screen). The following profiles are pre-seeded in the database for demonstration and audit purposes:

1. System Administrator (Admin)

- **Role:** Full system management, resetting environments, adding/modifying profiles.
- **Batch No / Username:** `admin`
- **Session PIN:** `111111`
- **Master Password:** `admin`

2. Malkhana In-charge (HC Priya Verma / Operator 092)

- **Role:** Accepting seized devices, verifying seals, assigning vault grid locations.
- **Batch No / Username:** `op_092`
- **Session PIN:** `092092`
- **Master Password:** `op_092`

3. Sub-Inspector (SI Rajesh Sharma)

- **Role:** Investigating Officer (IO). Creates cases, logs new seizures, runs crime-scene hash triage.
- **Batch No / Username:** `io_rajesh`
- **Session PIN:** `112233`
- **Master Password:** `io_rajesh`

4. Forensic Examiner (Dr. Vance / FSL Expert)

- **Role:** Forensic imaging, generating H3 hashes, drafting and digitally signing BSA Section 63 certificates.
- **Batch No / Username:** `dr_vance`
- **Session PIN:** `445566`
- **Master Password:** `dr_vance`

Sandbox Walkthrough Steps

To test the end-to-end Indian forensic chain of custody in the sandbox, follow this workflow:

1. Step 0 — Forensic Login:

- Log in as Sub-Inspector Rajesh (`io_rajesh` / `112233`). This initiates a custody session.

2. Step 1 — Case Seizure:

- Go to **NEW INGESTION** (**NEW_INGESTION**).
- Enter a Case CNR, Case FIR (e.g. **FIR 45/2026**), and Investigating Officer details.
- Stage 3: Enter Panch witness names, specify the device parameters, and check the write-blocker verification checkbox.
- Stage 4: Run the zero-trust terminal to copy the device bit-stream and generate the baseline **H1 Birth Hash**.

3. Step 2 — Malkhana Storage:

- Log out, then log in as the Malkhana In-charge (**op_092 / 092092**).
- Go to the **SEALED ARCHIVE** matrix.
- Assign the newly ingested item to a physical slot coordinate (e.g. Row 5, Column 8).
- Perform the **H2 Receipt Hash** check. Verify that H1 matches H2.

4. Step 3 — FSL Extraction & Certificate:

- Log out, then log in as Forensic Examiner Vance (**dr_vance / 445566**).
- Go to the **REPORTS** view.
- Select the evidence item to draft the Section 63 Certificate.
- Hold the seal button to cryptographically lock the certificate with the final **H3 Analysis Hash**.
- Export the Section 63 Certificate as a court-admissible PDF.
